

AMCINOVA

WORKBOOK FOR ENTREPRENEURS

From idea to online customers

A clear offer. A website that fits.
A practical next step.

Read, explore the examples and develop your plan.

With exercises and space for your own choices.

From idea to online customers

A practical start for service providers, webshops, and creators of digital products.

Clarify your offer. Build trust. Give visitors a logical next step.

Including 15 practical examples, 5 visual examples, a fillable website plan, and a checklist. No technical knowledge required.

Use the fillable fields in a PDF reader that supports forms and save your own copy. Your answers will not automatically be sent to Amcinova.

STEP 01

Start with a customer, not with a website

A nice website is only useful if visitors understand what you can do for them. This workbook helps you first choose and then build. You don't need to do everything at once: work out one offer for one recognizable group of customers.

What you will have at the end

A clear target audience, an offer in plain language, a layout for your website, and a plan to follow up with visitors. You can use this independently or take it to a web builder.

Choose your route.

Service provider: steer towards a good inquiry or appointment. Webshop: help visitors choose a suitable product. Digital product: first show a usable piece and clarify what the paid version adds.

Work small

Use one existing idea. Allocate ten minutes per chapter to write down choices. The examples are fictional; amounts and results are not promises. An initial version is meant to learn from real customers.

This is what it could look like - fictional example

Craftsman: painter Noor seeks requests for interior painting. Her first website shows three projects and asks visitors to submit a photo and their place of residence. Her goal is a suitable request, not just many visitors.

My business or idea.

I want a visitor to ultimately...

A recognizable craftsman in the image

A photo makes the example recognizable and gives the explanation context.

AI-generated sample photo - not a real customer project or set for sale.

Let your work speak.

This example photo clearly shows what the service is: indoor painting. Work posture, tools, and environment together tell the story. For your own website, preferably use your own photos of your work. Add a short explanation and a suitable inquiry button.

STEP 02

Who do you want to be there for?

Choosing everyone as a target group often makes your story unclear. Describe a group with a recognizable situation, need, and reason to search for something. Age alone usually tells too little.

This is how it becomes concrete

Too broad: I help entrepreneurs. Clearer: I help independent craftsmen who still need to write quotes after their work evening. You can expand later; your first page gets one main target group.

Listen before you fill in.

Ask three potential customers when they last faced this problem, what they did then, and what remained difficult. Ask about their experience rather than just whether your idea sounds good. Write down their own words.

Find the decision moment

What prompts someone to seek help now? A move, a growing business, a broken product, or a recurring frustration could be the reason. That moment helps you write a suitable message.

This is what it could look like - fictional example

Webshop: BalkonBegin targets individuals with small balconies who want to grow herbs for the first time. Their question is not: which pot is beautiful? But: what fits on my balcony and how do I keep it alive?

My customer and their situation.

The reason to seek a solution now

A product in the situation of your customer

A photo makes the example recognizable and gives the explanation context.

AI-generated sample photo - not a real customer project or set for sale.

This is how a small balcony becomes concrete

The photo shows how three herb pots fit on a balcony. Combine such an atmosphere image with information about dimensions and content. Do you sell seeds instead of plants? Then clearly state that the fully grown herbs are an atmosphere image of the possible result, not what is supplied.

STEP 03

Make the problem recognizable.

A visitor must recognize themselves in the first paragraph. Mention a concrete discomfort and a desired outcome. Avoid big words like revolutionary or guaranteed successful if you cannot show what you mean.

From function to benefit.

Function: a fillable quote template. Benefit: you don't have to type the same tasks repeatedly. Result: you can create a neat, complete quote. Do not promise time savings that you have not yet measured.

Check alternatives

Note three ways in which people currently solve the problem. These can be competitors, but also a spreadsheet, a knowledge source, or doing nothing. What do customers appreciate about that, and what do they miss? Use reviews as indications, not as proof that everyone feels the same.

Your distinction

Choose one difference that you can deliver, such as assistance with the initial setup, a simple method, or knowledge of a specific industry. Make that visible with an example.

This is what it could look like - fictional example

Digital product: StartBudget helps starters organize their fixed expenses. The message is: list your monthly expenses with a fill-in sheet. Not: get rich quickly. The promised result remains verifiable.

My customer is stuck on...

My solution helps because...

STEP 04

An offer that someone understands

Clearly state what someone receives, what they need to provide, and what is not included. A clear boundary prevents misunderstandings and makes it easier to choose.

Dienst

Example: a startup website with four pages, one round of revisions, and instructions on making adjustments. Specify who provides the text and photos. Also indicate whether hosting and maintenance are billed separately.

Webshop or digital product

For a physical product, execution, dimensions, and delivery are important. For a digital product, describe files, lessons, or tools, the required level, and how the customer gains access.

Basic and expansion

First create one usable basic offer. Only offer a more extensive version if it addresses a different need. Support can be valuable, but should not be necessary to understand an unclear basic product.

This is what it could look like - fictional example

Painter Noor offers a preliminary assessment, a written quote, and execution as agreed. Type of paint and number of layers are stated in the quote. Repair of hidden wood rot is separate consultation. The customer knows what they will and will not get.

This is exactly what the customer receives

--

This is not included / this is supplied by the customer

--

Calculate before offering discounts.

A selling price must allow room for execution, use, support, and unexpected work. A high turnover is not the same as a healthy result. Therefore, make a simple calculation before making offers.

Count all relevant costs.

Think about materials or purchases, your hours, hosting, software, AI use, payment processing, customer acquisition, and aftercare. Spread fixed costs over a cautiously estimated number of customers. Check that amount again as you grow.

Fictitious calculation example

A product costs 30 euros in execution, 20 euros in assistance, and 10 euros in allocated other costs. With a sales price of 100 euros, all exclusive of VAT, 40 euros remains before unaccounted costs and taxes. After a 20 euro discount, that is still 20 euros.

Clarify payment choices.

Show one-time amounts, recurring costs, and the total for split payments separately. Name the term and conditions. A payment plan changes when you receive money; your costs often continue earlier.

This is what it could look like - fictional example

With a sales price of 100 euros and 60 euros in costs, 40 euros remains: 40% of the sales price. That is different from 40% markup on costs: $60 \times 1.40 = 84$ euros. Agree on which calculation you use before choosing a margin.

My costs per customer, with assumptions.

My price and room for support.

Build a website with one clear task

Visitors do not need to understand your entire business first. Show on every important page who the offer is for, what it yields, and what the next step is. A short, complete page is better than many empty pages.

A useful order

Start with the problem and your solution. Then show what the customer gets, how it works, a real example, and answers to frequently asked questions. Conclude with the same clear next step.

Choose the right button.

Service provider: discuss my question or request a quote. Webshop: view implementations or add to cart. Digital product: view an example or view the complete content. The button text must correspond to what happens next.

Reduce doubt.

Make contact details, prices, or the pricing method easy to find. Explain when an applicant can expect a response. Check that the form, confirmation, and back button work.

This is what it could look like - fictional example

BalkonBegin displays at the top: start with herbs on a small balcony. Below are three sets, the dimensions, and what is included. The button 'View the starter set' opens that specific set, not a general contact page.

The main task of my page

My button text and the destination behind it.

A website for painter Noor

This is how the offer, image, and a clear follow-up step become one whole.

1

You immediately understand what Noor does.

The headline and subtitle mention the offer. The visitor doesn't have to search.

2

Image makes it concrete

Replace the illustration later with a project photo of your own, with permission where necessary.

3

One clear action

The button leads to a short inquiry, with space for photos and the desired period.

A product page for BalkonBegin

Show what someone gets before asking for a purchase.

● ● ● balkonbegin.example | product page

BALKONBEGIN

AI example photo

Herb starter kit

For a small balcony

3 herb plants, pots, and starter guide

Check measurements and light requirements

EUR 24.95 incl. VAT

Fictitious example price

Add to shopping cart

View content, dimensions, delivery, and return information.

1

An image of the offered set

An atmosphere image may help but must be clearly distinguished from the product content.

2

The most important information is included

Leave no doubt about the content, execution, and total costs.

3

The button does what it promises

After clicking, the customer sees this product in the shopping cart, with the chosen variant.

STEP 07

Photos and proof that inspire trust

Use images that truly show what you offer. A fitting photo helps someone understand; an incorrect product photo may create expectations that you cannot fulfill.

Create a small image list.

Gather one overview photo, two details, and one usage or result image. For services, a work example and a photo of you in action can be useful. Use the same crop for before-and-after photos so the difference is clear.

Let real experience speak.

Ask customers what they had done, how they experienced the process, and what results they saw. Publish only genuine reviews. Ask for permission for recognizable customer photos and use images for which you have the necessary rights.

No customers yet?

Then honestly show a demonstration or concept. Label an example as an example. Do not use fabricated reviews, customer numbers, or results to fill an empty page.

This is what it could look like - fictional example

Noor photographs the same room before and after painting from the same angle. She mentions what has been done and asks for permission before publishing the photo. A demonstration photo is labeled as a project example.

I can create these images myself

This real example I can show

Give something away that helps immediately.

A good giveaway solves one small problem and connects to your paid offer. It is useful without purchase. Make it practical enough that someone can take a step the same day.

Three useful forms

Service provider: a preparation checklist for a consultation. Webshop: a selection aid that compares implementations. Digital product: a fully developed example with a small exercise. Choose one form instead of everything at once.

Connect content and next step.

A free website check fits with website help. A random prize question may attract people who do not need your product. State what the logical next step is at the end and who it is intended for.

Do not ask for more than necessary

If you deliver the giveaway via email, explain what someone will receive. Make any further marketing clear and ensure that opting out is easy. Do not make the free result dependent on an unexpected payment step.

This is what it could look like - fictional example

StartBudget gives away one month planner with fillable explanation for free. The paid version contains twelve monthly sheets, an annual overview, and detailed exercises. The free version works on its own; the extension saves extra research.

My giveaway solves this small problem.

Then, the reader can optionally...

Start for free, expand focused.

StartBudget: the free version is usable; the paid version adds something.

FREE

One month in view

MY MONTHLY BUDGET

Income	2,400
Fixed costs	1,300
Groceries	350
Other / savings	750

Fictitious filling, amounts in euros

1 input sheet + brief explanation

[Download free monthly magazine](#)

EXTENDED

A complete overview of the year

MY MONTHLY BUDGET

Income	2,400
Fixed costs	1,300
Groceries	350
Other / savings	750

Fictitious filling, amounts in euros

12 months + annual overview

[View the complete content](#)

1

First provide a small, complete solution.

The monthly magazine provides immediate help. The reader does not need to buy anything to use it.

2

Make the extra value visible.

The expansion includes several months, an annual overview, and exercises. Show that content before choosing the price.

This is a design example, not an available Amcinova budget product.

STEP 09

Help someone choose, step by step.

A customer journey is the route from initial interest to using your product. Each step must connect to the previous one. You do not need to create a long series of pages if one clear page is sufficient.

A simple route

A message grabs attention for a recognizable problem. The visitor opens a suitable page. They use a checklist or view an example. Afterwards, they can choose a product or make an inquiry. Upon purchase, they receive clear starting instructions.

Do not sell unnecessary extras.

An expansion must add something. Think of decoration, guidance, or a tool that fits with the chosen solution. Let the basic choice also simply conclude and select paid extras without unnoticed beforehand.

Check the connection

Someone who asks for a simple website example should not end up on a general management page afterward. Retain their previously filled data and choices where possible so they do not have to start over.

This is what it could look like - fictional example

Amcinova route as design: read the free guide, fill out the website plan, view the example, save a project, and choose a suitable package. A support package is optional. The free customer trial still needs to be activated.

My route from first visit to result.

Which step could be simpler?

The customer journey at a glance

A design for Amcinova. Not all steps are yet available as customer trials.

What the promotion agent can prepare for this

A suitable message to the guide, explanation at the example, and relevant follow-up proposals. After purchase, the customer should receive help getting started, not the same sales offer again.

Test phase: the shopping cart saves a TEST request. Payment, paid access, and automatic sending are not yet active.

STEP 10

Choose a feasible source of visitors.

Start with one channel that fits how your target audience searches and decides. You don't need to be present everywhere at once. Finding a repeatable approach first makes expanding clearer.

When people are actively searching

Create pages that answer concrete questions. Use understandable titles and clearly show which offer is related. For a local service, work area and recognizable projects are useful. Write for the visitor, not just for keywords.

When people first need inspiration

Show a result, method, or choice on social media. One project can yield multiple posts: initial situation, detail, explanation, and final result. Use a link to a page that fits that post.

Paid attention requires a limit

If you advertise later, determine in advance what you want to measure and how much you are willing to spend on the trial. Evaluate not only reach or clicks, but also the quality of inquiries and costs per customer.

This is what it could look like - fictional example

Noor starts with a weekly project report: a clear photo, what the client wanted, and how she approached it. The link goes to her page for interior painting. She notes how people found her in requests.

My first channel and why.

Three questions I can create content about

STEP 11

Follow up with something useful

Not every interested party is ready to buy immediately. Good follow-up helps in making a decision. Keep the message relevant to what someone requested and respect their communication choice.

A series of examples

First message: deliver what you promised and give one usage tip. Then: answer a frequently asked question with an example. Next: explain a fitting next step. This is a possible setup, not a mandatory scheme.

Adjust the route.

Those who have already purchased need startup instructions instead of the same sales message. Those who request help should receive a clear response. Stop a sequence when someone unsubscribes. Therefore, keep the contact status in one place.

Automate only after a trial

Check sender, links, personalization, and stop moments with your own test address. Prepare drafts first for control. Sending automatically is a separate step; a drafted message is not yet sent.

This is what it could look like - fictional example

After a requested planner: Here is your monthly magazine. Start with your fixed costs; the explanation is at the top. A later message can provide a fillable example. Those who have already purchased the full version receive explanations about usage instead of the same offer again.

My first helpful follow-up message.

When should follow-up stop or change?

STEP 12

Measure where the route gets stuck.

Look at a small number of figures that connect to your goal. A service provider wants useful requests; a webshop wants orders and satisfied customers. More visitors are only useful if the rest of the route is correct.

Keep track of these steps.

Keep track of visitors, inquiries or trial starts, completed purchases, and costs per period. Also, write down frequently asked questions and reasons for not buying. Compare the same periods and definitions.

Fictitious measurement example

With 200 visitors and 10 inquiries, the inquiry rate is 5%. If 2 of those inquiries become customers, that is 20% of the inquiries. With 60 euros in advertising costs, that is 30 euros in advertising costs per customer, excluding other costs. Small numbers can fluctuate significantly.

Change one important component.

Many visits but little action? Review message and next step. Many requests but few suitable customers? Clarify for whom the offer is. Test one change and write down in advance what result you expect.

This is what it could look like - fictional example

A form gets ten starts but only two submissions. First, check if it works on a phone and if there are unnecessary questions. Then test a shorter version. More submissions only count as an improvement if they are also usable.

My main measurement point.

My first improvement and how I will check it.

STEP 13

Your website plan on one page

Fill out this plan before you start building. It is your briefing for yourself, a builder, or an AI assistant. Use concrete language; missing information can remain visible instead of being fabricated.

This is what it could look like - fictional example

Sample briefing from Noor: I paint indoors for private clients in my area. My site must showcase work and collect photo requests. Calm appearance, dark blue and white. Pages: services, projects, and contact. Price via a quote; the client sends photos, location, and desired timeframe.

Company name, target group, and problem

My offer and main difference.

Style, colors, and available own images.

Desired pages and main action

Pricing structure, contact, and desired follow-up step.

This is what a filled-out website plan looks like

Use this as an example for your own fillable plan on the previous page.

BUSINESS AND CUSTOMER

Painter Noor. For individuals who want their living room painted.

OFFER AND DIFFERENCE

Indoor painting, with a personal assessment and a clear quote.

UITSTRALING

Calm and neat. Dark blue and white. Own project photos with permission.

PAGES AND ACTION.

Services, projects, about Noor, and contact. Main button: Request a quote.

WHAT ARE WE ASKING?

Photo of the space, residence, desired period, and contact details.

PRICE AND FOLLOW-UP.

Price via quote. Confirm receipt and agree on when a response will follow.

From this plan to a sample page.

Give this overview to your builder or AI assistant. Ask for missing information to be marked and not to fabricate prices, reviews, or customer results.

STEP 14

Check before inviting visitors

Go through your website as if you are a new customer. Do this on both a phone and a computer. Additionally, have someone test who has not been involved in building. A nice front is not enough if the route behind it stops.

Content and operation

Is it immediately clear what you offer? Are the photos, amounts, and texts correct? Are buttons readable and easy to hit? Do the menu, contact links, and form work? Is an error message understandable and does the filled information remain where possible?

Account and order

Can someone sign up and find their own data? Does a choice get saved? Does the right application come into management? Is double clicking handled properly? Later also test failed and canceled payments; only a confirmed payment should grant paid access.

Delivery and follow-up.

Does the customer receive what was promised? Do the download and access work? Are monthly costs and support clear? Are test data not counted as real revenue? Are there no fictitious reviews or unverified claims on the page?

This is what it could look like - fictional example

Practical test: Sam opens the site on his phone, chooses the starter set, and tries to submit the form empty. He expects a clear message. Afterwards, he fills in test data and checks whether the confirmation and request in management match.

I still need to remedy these three points

Tested by / date / result

STEP 15

From plan to a first example.

You now have the basis for your website. The next step is a small, visible example that allows you to assess whether the message, layout, and appearance fit your business.

Take your filled plan with you.

Begin with your business name, target audience, offering, style, and main action. Use real photos if you have them. Review AI texts and images before publishing: you know your offer and clients best.

Amcinova as a tool

Amcinova develops tools for websites, quotes, planning, and promotion. Check which products suit your work. You don't have to take all components. A saved preference or test request is not yet a purchase.

View the current options

Go to agents.amcinova.com/account.html. This release is part of the test phase of October 2026: trial prices are not final, payments are still pending, and a free customer trial for the site builder is still in preparation. You can already use the workbook independently.

This is what it could look like - fictional example

First construction assignment: create a calm homepage for painter Noor with her offer, a place for real project photos, and the button 'Request a quote'. Do not invent reviews, prices, or completed assignments. Then, review every button together.

My first small step this week.

What help do I truly need?

[View My Amcinova >](#)
